SEPPIC

SEPINOV™ EMT 10
Hydroxyethyl acrylate / Sodium acryloyldimethyl Taurate Copolymer

New 2-in-1 powder polymer:
* excellent emulsifier/stabilizer
* thickener at extreme pH values

…VERSATILE in formulation!
SEPINOV™ EMT 10
FEATURES

New polymer presented in powder form:

- **Thickening capability stable over a wide pH range (3 to 10)**
- **Excellent emulsifying/stabilizing capability at low polymer content**
- **Easy-to-use pre-neutralized powder, dispersible in the oil or aqueous phase, cold or hot process**
- **Novel chemical structure, guaranteeing perfect compatibility with specific active ingredients (DHA, AHA, H₂O₂, etc.)**
- **Supple texture, easy pick up**
I. EMULSIFYING-STABILIZING CAPABILITY

Capability to emulsify–stabilize oil phase at low polymer content

* Cream-gel formula (pH = 6–7): Polymer qs viscosity, Cetearyl Ethylhexanoate 15%, Sepicide LD 1%, water qs 100%

0.6%: minimum content to stabilize oil phase ⇒ 20,000 mPa.s
0.7%: minimum content to stabilize oil phase ⇒ but only at high viscosity: 50,000 mPa.s and ineffective at acidic pH
1%: minimum content to stabilize oil phase ⇒ but only at high viscosity: 90,000 mPa.s

Low content of SEPINOV™ EMT 10:
- stable cream gel at moderate viscosity,
- at all pH values,
- whatever the oil phases (vegetable oil, silicone oil, mineral oil, ester...),
- even for higher viscosities
SEPINOV™ EMT 10
I. EMULSIFYING-STABILIZING CAPABILITY

Capability to emulsify–stabilize up to 50% of oil phase

Cream-gel formula: Caprylic capric triglycerides \( X \% \), polymer content qs 100 000 mPa.s, water qs 100 %

- **Powder A**: Ammonium acryloyldimethyltaurate/VP copolymer
- **Powder B**: Acrylates/C10-30 Alkyl acrylate crosspolymer
- **Powder C**: Sodium polyacrylate

2% of SEPINOV™ EMT in a cream-gel can “emulsifies–stabilizes” up to:
- 50% of Caprylic capric triglyceride or
- 40% of paraffin oil or
- 40% of cetearyl isononanoate over a wide pH range
II Thickening capability

- over a wide pH range (3 –10)
- to produce stable aqueous gels whatever the final viscosity
- with electrolytes
- with specific active ingredients: DHA, H₂O₂
- with solvents
- transparent formulation
SEPINOV™ EMT 10
II. THICKENING CAPABILITY

to produce aqueous gels whatever the final viscosity

Comparison of the % of polymer used to produce aqueous gels at 50,000 and 100,000 mPa.s with SEPINOV™ EMT 10, SIMULGEL NS and SEPIGEL 305

Viscosity measured with Brookfield LVT S6

Spontaneous pH (5-6)

**2 tests to determine the compatibility with DHA:**

1 – **Color change after 3 months at 45°C:** calculation $\Delta E = \sqrt{(\Delta L^2 + \Delta a^2 + \Delta b^2)}$ thanks to measurements of L, a, b by the chromameter (Minolta CR200)

- If formula ivory to pale yellow $\Leftrightarrow$ **Compatible** $\Leftrightarrow \Delta E < 8 \pm 2$
- If formula yellow to brown $\Leftrightarrow$ **Non-compatible** $\Leftrightarrow \Delta E > 8 \pm 2$

2 – **Enzymatic assay after 3 months at 40°C** (performed by Merck): measurement of DHA degradation by absorbance

*Stability of an aqueous solution containing 5% DHA after 3 months at 40°C = 85% ± 5%*

- If DHA degradation in the formula <15% ± 2% $\Leftrightarrow$ **Compatible**
- If DHA degradation in the formula >15% ± 2% $\Leftrightarrow$ **Non-compatible**
Compatibility with DHA

In our polymer range, Simulgel NS and Sepinov EMT10 show the best compatibility with DHA. Simulgel NS and Sepinov EMT10 are ideal polymers on the market to stabilize your self-tan formulas. There is a good correlation between enzymatic assay and color change ($\Delta E$).
Compatibility with $H_2O_2$ for the formulation of transparent bleaching gel at pH 4.5

**Bleaching cream-gel formula:**
- SEPINOV™ EMT 10 1.0%
- stabilized $H_2O_2$ 6.0%
- Tromethamine qs pH 4.5

*Appearance: transparent gel*
*Viscosity: 33 000 mPa.s*

Transparent bleaching gel stable with 6% $H_2O_2$ at pH 4.5

*Stability testing in progress: Constant appearance and viscosities*

- 3 months at RT
- 3 months at 4°C
- 1 month at 45°C
III. FORMULATION ADVICE

Great flexibility of use

- No neutralization
- Easy to disperse in the oil or aqueous phase (cold or hot process)
- Resistant to high temperatures (80°C)
- Resistant to shear
- Resistant to pH variations (effective at all pH values)

Formulation tips

- **Recommended level**: 0.2 to 3%

- **Cream –gel**: disperse SEPINOV™ EMT 10 in the oil phase or the aqueous phase. Cold or hot process.

- **Emulsion**: add SEPINOV™ EMT 10 at the beginning of the process. Disperse it in the oil phase or the aqueous phase before emulsification
IV. TOXICOLOGICAL DATA

**Excellent tolerance of SEPINOV™ EMT 10:**

- **Well tolerated in 48 h patch** (20 volunteers): non-irritant at 2.2% in water
- **Good ocular tolerance** (HET CAM, RBCA): non-irritant at 5% in water
- **Non-mutagenic** (Ames test)
- **Non-irritant and non-sensitizing** (Marzulli and Maibach)

**Procedure**

Introduce step by step Sepinov EMT 10 in water under mecanic stirring. Stir this phase until the gel is viscous. Add Lanol 99 then Aquaxyl under mixing. Add preservatives and fragrance.

</tbody>
</table>

### Procedure

Heat Montanov L and the ester at 80°C. Introduce step by step Sepinov EMT10 in the oily phase. Add water warmed before at 75°C.

Homogenize with high shear for few minutes (rotor/stator turbine).

Cool the emulsion under moderate stirring and introduce phase C at around 30°C.

Adjust the final pH around 5 if necessary.
Clear serum for oily skin without oil phase

</tbody>
</table>

**Procedure**

Solubilize Lipacide C8G and Montanox 20 under mechanic stirring, in water heated at 80°C (the mixture should be clear).
Cool at around 30°C then adjust the pH around 5.2 with the sodium hydroxide.
Introduce step by step Sepinov EMT 10 in phase A under mixing.
Add water then Ethanol and Sepicide HB.

**INTEREST:** silicon rich cream: SEPINOV EMT 10 allows to emulsify up to 80% of silicon internal phase

**Characteristics**

- **Appearance:** white emulsion
- **pH:** around 5
- **Viscosity at room temp:** 26,000 mPa.s BROOKFIELD LV2 6rpm
- **Viscosity after 1 month at 45°C:** 14,700 mPa.s BROOKFIELD LV2 6rpm
- **Recovery of viscosity at RT (after 1 month at 45°C):** 25,000 mPa.s BROOKFIELD LV2 6rpm
- **Stability:** > M1 at room temp & 45°C
  > M1 after freeze thaw cycles -5 / +40°C
  Stable when centrifuged 20’ at 3000 rpm

**Procedure (pilot DUMEK 2kg)**

Premix ingredients in A. Add A into the water phase and start homogenization (rotor stator speed1=700rpm 2’ then speed2=1500 rpm 8’). Then add phase C and keep homogenization for 10’ at 1500rpm. Finally add ingredients in D thus homogenizing 5’ more.
